### CURB STOCKS.

J. A. Minnear & Co., say today:— Prices advanced steadily today and the net gain in several of the active issues was over two points. The Mexican situation did not attract much attention and it now looks as if something very serious must transpire to make it a market factor. Copper exports for the week ending Feb. 25th were 3,550 tons showing a slowing up in the foreign demand for copper. The feature of the day was the strength in Franklin, which sold up to \$7.

## LAUNCH NON-PARTISAN BOOM FOR RE-ELECTION OF FERRIS

Continued From First Page.

than eight hundred whose signatures were affixed last evening. The list of names is at present in the State Savings bank of Laurium, and all day the telephone has been busy with calls from those who request that their names be added.

**County Organization.**  
The movement primarily is by citizens' Alliance members, pledged to exert their influence to the maintenance of law and order in this district. Those who have taken an interest in the project intend to do their utmost to foster the movement until the first of March, when the first citizen should be elected to become a candidate to succeed himself. It is the earnest hope of members so far enrolled that Governor Ferris will so announce himself so that they may find the opportunity to make manifest materially by their votes, their hearty approval of the course he has followed in administering to the affairs of state.

Mr. Fisher, in introducing the subject at the close of the caucus, eulogized the governor and in glowing terms expressed the admiration of the people of the copper country for the splendid, manly traits of character he possesses, also the debt of gratitude the people of this region owe Governor Ferris.

**Talk by Mr. Fisher.**  
He briefly reviewed the epoch through which this region has just passed, referring significantly to the era of violence brought on by the federation with the expression, "You know what I mean." And the working men in the caucus group before him, who for eight months have faced abuse and oftentimes violence, certainly knew what he meant. Mr. Fisher highly complimented the governor for his action in sending the entire state militia here, speaking of the confidence the presence of that well-trained, well-controlled army of 3,700 Michigan youths restored in the hearts of residents of this region, the feeling of safety for life and property they brought with him.

Reference was also made to the ill-timed opposition to the course of the governor by those whose unlawful ends were defeated and to the desire of the copper country to go on record in support of the governor and his manly stand. Mr. Fisher, on behalf of the people of the copper country, urged that Governor Ferris enter the race to succeed himself and pledged the support of the people of the copper country, irrespective of party leanings to the people's cause.

Mr. Fisher's address, while brief, was forceful and aroused his audience thoroughly. His concrete expression of friendly feeling for the governor and gratitude for his attitude, while somewhat tardy, was nevertheless very enthusiastic.

## KEEP THINGS OUT OF THE BABY'S MOUTH.

**State Bacteriologist Sounds Warning to Prevent Infections.**

Lansing, Mich., Feb. 27.—That food mothers' "bad" habits have a big influence on the mortality rate of infants is the declaration of Dr. M. L. Holm, state bacteriologist for the state board of health. That the diseases of infants are due largely to the things which adults are permitted to take into their mouths after these things have been dropped on the floor in public places and even in their own homes, is also claimed. Dr. Holm is decidedly against the "quicker" feeding ruse and a brand of sweet biscuit recently appearing for the supposed pacification of the infant.

Records of analyses divide many unusual things at the state laboratory and only tend to prove that the infant occupies a most dangerous position regardless of the love with which it may be surrounded. Dr. Holm says: "Being a baby is a very hazardous occupation. In fact, statistical records show that it was less dangerous to be a soldier in the battle of Gettysburg than to be a baby in the twentieth century."

"In Michigan alone over 3,000 babies die every year from preventable causes. Infectious diseases are responsible for about 2,000 deaths every year among children under two years of age in Michigan and these cases too often are the result of criminal carelessness, ignorance or neglect. Most of the infections in children occur through the mouth. Careless friends persist in handling a baby with their street gloves or soiled hands.

"The innocent baby is unprotected by immunity from previous disease and is highly susceptible to the germs of contagion in any form. The mother should learn to appreciate that public contamination is potential infection, and the admiring mother will appreciate any admiration with 'hands off.'"

## TEN MEN ARE NEEDED TO REMOVE SICK GIRL.

Disease of "Elephantiasis" Causes Her Weight 450 Pounds.  
Philadelphia, Feb. 27.—It required the combined strength of ten men to remove Miss Magdalene Hays, weighing 450 pounds, from her home to an ambulance, so that she could be taken to the Philadelphia hospital. She is said to be suffering with a disease known as "elephantiasis."

Two ambulance attendants succeeded in lifting Miss Hays from her bed, but could not carry her further. They telephoned for assistance and two more attendants came.

The four could only carry her a few feet and she had to be put on the floor. The police were called on, and six husky patrolmen were dispatched to the house.

The ten men grasped Miss Hays and carried her down three flights of stairs to the ambulance.

The men placed her on one side of the ambulance. The vehicle lurched to one side and would have capsized if three of the policemen had not braced it.

With four men walking on each side to see that Miss Hays did not shift her position, the ambulance was driven slowly to the hospital. Upon the arrival there the ten escorts had another "back-breaking" job in carrying Miss Hays to a ward.

## DELTA TAU DELTAS MEET.

Chicago, Ill., Feb. 27.—Graduates and undergraduates representing leading colleges in various states from Illinois to the Pacific coast assembled at the Hotel La Salle today for the annual convention of the western section of the fraternity. The gathering will continue two days, concluding with a banquet tomorrow night. The Delta Tau Delta is one of the largest of the Greek letter societies, having a total membership exceeding 10,000.

## ADDITIONAL HOUGHTON

### SCHOOL SURVEY BLANKS.

Are Being Distributed by Copper Country Commercial Club.

Through the Copper Country Commercial club there is being made a widespread distribution in the copper country of the Upper Peninsula Educational association's requests for information in connection with the survey being made by the association's bureau of research. Secretary Price yesterday mailed the bureau's circular to every member of the commercial club with a request that the blank be filled out and mailed to the local superintendent of schools by each member.

The bureau of research is making a survey of the upper peninsula with the object of securing from the parents of school children and from all others interested in the education of the young their opinions on matters tending to the better development of the schools, to the increase in their usefulness.

The inquiry is divided into requests for opinions under four heads: Moral education. Physical training and care of health. Industrial education. Education generally.

Under the first head the opinions of parents and men and women generally are sought as to the place of the schools in the moral training of the child, how and to what extent the schools may intervene between parent and child. The question of sex hygiene is also included.

Under the second head, questions involving the extent to which the schools should go in developing the children physically are asked. Compulsory medical inspection is an important subject offered for discussion.

Under industrial education the questions concern the extent to which schools may go in teaching children vocational, how the schools and industrial concerns may share and co-operate in this education, whether or not agriculture should be taught and to what extent girls should be educated for a life work.

The general questions refer to the qualifications of school officers, co-operation of home and school, length of school year and social needs to which school buildings may be put.

Not over one-fourth of the homes in Breckinridge are supplied with electricity. The electric plants are owned by the municipality.

Last year only 23 murders were committed in the city of London.

Argentina in 1912 produced 21,818,620 pounds of butter.
